15. Travel Cost Calculator 8

1. Age Calculator

Algorithm:

Step 1: Start
Step 2: Set current year = 2026
Step 3: Input birthyear from the user
Step 4: Calculate age = current year - birth year
Step 5: Print age
Step 6: Stop

2. Area Calculator

Algorithm:

Step 1: Start
Step 2: Set pi = 3.14
Step 3: Input radius of the circle
Step 4: Calculate area circle = pi *radius^2
Step 5: Print area circle
Step 6: Input length and width of the rectangle
Step 7: Calculate area rectangle = length *width
Step 8: Print area rectangle
Step 9: Calculate total area = area circle + area rectangle
Step 10: Print total area
Step 11: Stop

3. Average Speed Calculator

Algorithm:

Step 1: Start
Step 2: Input distance1 and time1 for section 1

Step 3: Input distance2 and time2 for section 2
Step 4: Calculate speed1 = distance1 / time1
Step 5: Calculate speed2 = distance2 / time2
Step 6: Calculate total distance = distance1 + distance2
Step 7: Calculate total time = time1 + time2
Step 8: Calculate average speed = total distance / total time
Step 9: Print speed1, speed2, total distance, total time, average speed
Step 10: Stop

4. Bank Deposit Calculator

Algorithm:

Step 1: Start
Step 2: Input principle amount
Step 3: Calculate interest = principle * 0.07
Step 4: Print interest
Step 5: Calculate total = principle + interest
Step 6: Print total amount after one year
Step 7: Stop

5. Compound Expression

Algorithm:

Step 1: Start
Step 2: Input three numbers: a, b, c
Step 3: Calculate sum = a + b + c
Step 4: Print sum
Step 5: Calculate average = sum / 3
Step 6: Print average

Step 7: Calculate expression = (a + b)^2 + (b + c)^2
Step 8: Print expression
Step 9: Stop

6. Data Storage Conversion

Algorithm:

Step 1: Start
Step 2: Input data size in MB
Step 3: Calculate kb = size * 1024
Step 4: Print size in KB
Step 5: Calculate GB = size / 1024
Step 6: Print size in GB
Step 7: Stop

7. Electricity Bill Calculator

Algorithm:

Step 1: Start
Step 2: Input unit consumed
Step 3: Set charge per unit = 12
Step 4: Set service charge = 100
Step 5: Calculate bill amount = unit consumed * charge per unit
Step 6: Calculate total bill = bill amount + service charge
Step 7: Print total bill
Step 8: Stop

8. Exam Result Sheet

Algorithm:

Step 1: Start
Step 2: Input name and marks for subject 1
Step 3: Input name and marks for subject 2
Step 4: Input name and marks for subject 3
Step 5: Input name and marks for subject 4
Step 6: Calculate total marks = mark1 + mark2 + mark3 + mark4
Step 7: Print total marks
Step 8: Calculate avg marks = total marks / 4
Step 9: Print avg marks
Step 10: Calculate percentage = (total marks / 400) *100
Step 11: Print percentage
Step 12: Stop

9. Mathematical Expression

Algorithm:

Step 1: Start
Step 2: Input four numbers: a, b, c, d
Step 3: Calculate expression = (a + b)^2 + (b + c)^2 + (c + d)^2
Step 4: Print expression
Step 5: Calculate average = (a + b + c + d) / 4
Step 6: Print average
Step 7: Stop

10. Monthly Expense Calculator

Algorithm:

Step 1: Start
Step 2: Input expenses for food, clothes, education, transport, others

Step 3: Calculate monthly expenses = food + clothes + education + transport + others
Step 4: Print monthly expenses
Step 5: Calculate yearly expenses = monthly expenses * 12
Step 6: Print yearly expenses
Step 7: Stop

11. Physics Formula

Algorithm:

Step 1: Start
Step 2: Input initial velocity (u), final velocity (v), and time (t)
Step 3: Calculate acceleration = (v - u) / t
Step 4: Print acceleration
Step 5: Calculate distance = u * t + 0.5 * acceleration * t^2
Step 6: Print distance
Step 7: Stop

12. Profit Margin Calculator

Algorithm:

Step 1: Start
Step 2: Input product1 name, cost1, sell1
Step 3: Calculate profit1 = sell1 - cost1 and print profit1
Step 4: Input product2 name, cost2, sell2
Step 5: Calculate profit2 = sell2 - cost2 and print profit2
Step 6: Input product3 name, cost3, sell3
Step 7: Calculate profit3 = sell3 - cost3 and print profit3
Step 8: Calculate total cost = cost1 + cost2 + cost3
Step 9: Calculate total selling = sell1 + sell2 + sell3

Step 10: Calculate total profit = total selling - total cost
Step 11: Calculate profit percentage = (total profit / total cost) * 100
Step 12: Print total cost, total selling, total profit, profit percentage
Step 13: Stop

13. Salary Calculator

Algorithm:

Step 1: Start
Step 2: Input basic salary
Step 3: Calculate HRA = basic * 0.10
Step 4: Print HRA
Step 5: Calculate DA = basic *0.05
Step 6: Print DA
Step 7: Calculate gross salary = basic + HRA + DA
Step 8: Print gross salary
Step 9: Stop

14. Speed Calculator

Algorithm:

Step 1: Start
Step 2: Input distance in km
Step 3: Input time in hours
Step 4: Calculate speed = distance / time
Step 5: Print speed in km/h
Step 6: Stop

15. Travel Cost Calculator

Algorithm:

Step 1: Start

Step 2: Input distance to travel in km

Step 3: Input expenses per km

Step 4: Input number of days

Step 5: Calculate total cost = distance *expenses *days

Step 6: Print total cost

Step 7: Stop
